

THE DOHA DECEPTION

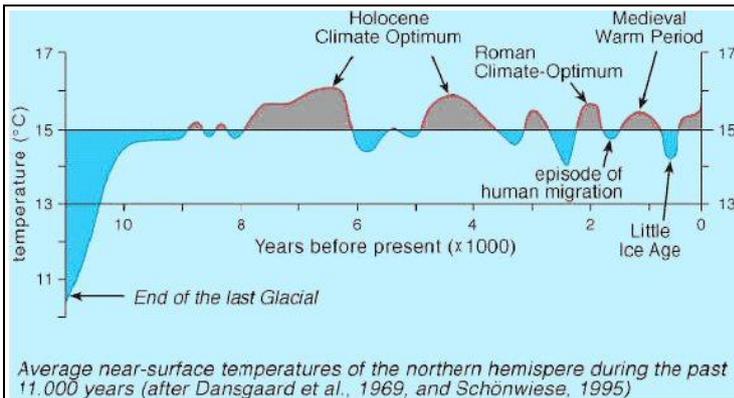

CLIMATE CHANGE CRISIS “CULT” MISLEADS GOVERNMENTS, TERRORIZES CITIZENS, & WASTES RESOURCES¹ (SEE END NOTE FOR REFERENCES)

FACTS – The UN Climate Change predictions are:

1. **Incomplete.** The UN/IPCC reports exclude the overwhelming scientific evidence that the sun is the main driver of climate change. Not CO₂.
2. **Inaccurate.** Climate Change prediction models done on computer have been wildly inaccurate; when accurate data is entered about actual recent temperatures, the computer models cannot accurately “hind-cast” (calculate temperature patterns in reverse).
3. **Based on assumption.** Some UN/IPCC –allied scientists have assumed that CO₂ drives temperature – but this has not been scientifically proven. For the past 16 years, despite a rise in CO₂, the UK Met Office reports there has been no global warming.
4. **Out of context.** Global temperatures began being recorded in the late 1880s. But historic human records of temperature change date back centuries and geological evidence dates back at least 500 million years. In context, today’s climate and weather are perfectly normal.
- 5.

a. Real temperatures in red; IPCC predictions in dotted lines.

5. Wasting resources. Fear of CO₂ emissions has led to a “rush to renewable.” But “renewables” like wind and solar are unreliable energy producers. They require 24/7 back-up power generation by gas-fired plants. This is wasteful and very expensive for no energy benefit. It’s not “free” energy at all.
6. Factually incorrect. The climate change crisis cult has made people believe that carbon dioxide (CO₂) is a toxic gas in large quantity that threatens human life. In fact, CO₂ is the essence of life - without it there would be no oxygen. CO₂ is plant food, and more CO₂ increases plant growth and crop yields. CO₂ is a trace element in the atmosphere— occurring at about 0.04%.
7. Economically devastating. Citizens of Western nations have been plunged into fuel poverty in the UK, Ontario, Spain, and California as extreme “carbon reduction” measures were enacted, driving consumer and business energy prices sky-high while doing zero for the environment (see point 5. Above). Clever investors get rich on carbon taxes/trades called “climate wealth” while crushing consumers.
8. Based on one-sided research. Billions are spent on climate change research dedicated to the unproven theory of man-made global warming through use of fossil fuels; very little is spent on understanding more significant modifying natural factors like the sun, volcanoes, ocean currents etc.
9. Rife with conflicts of interests. Agenda-driven ENGOs have invaded the UN Climate organizations at all levels; scientists have been co-opted to be “climate witnesses”, wealthy speculators lead the charge, capitalizing on carbon taxes, subsidies for renewable, and carbon trades at your expense.
10. Environmentally destructive & expensive. \$1 trillion dollars spent in a decade on “carbon reduction” – biofuels take up valuable food crops, and have no net positive production of fuel. “Renewables” wastefully consume energy resources for limited power generation in return, creating different kinds of pollutions, emission, and human/wildlife damage – and no net benefit.
